Sympathetic Storming After Severe Traumatic Brain Injury 30

Denise M. Lemke
The stress response known as sympathetic storming can occur within the first 24 hours after severe traumatic brain injury or up to weeks later. This article reviews the pathophysiology of sympathetic storming, variations in signs and symptoms, potential treatment options, and education of families.

CE Article

Massive Pulmonary Embolism 39

Kathleen Shaughnessy
Massive pulmonary embolism in the setting of syncope and cardiac arrest is often fatal if not rapidly diagnosed. The author presents a case study of a patient with pulmonary embolism, and discusses risk factors, signs and symptoms, diagnostic findings, treatment goals, and patient education.
