Switching to Once-Daily Evidence-Based β-Blockers in Patients With Systolic Heart Failure or Left Ventricular Dysfunction After Myocardial Infarction

Nancy M. Albert

Reducing dosing frequency for patients with heart failure simplifies the medication plan and may improve adherence to prescribed medications. The author discusses the practical considerations of the use of evidence-based β-blockers.

Advance Directives: Results of a Community Education Symposium

Elizabeth B. Later and Don King

The authors discuss access to information and education about end-of-life care as barriers to the completion of advance directives. The results of a pilot symposium designed to overcome these barriers are also presented.

Designing a Comprehensive Model for Critical Care Orientation

Linda L. Morris, Pamela B. Pfeifer, Rene Catalano, Robert Fortney, Edith L. Hilton, Julia McLaughlin, Greta Nelson, Janet Palamone, Robb Rabito, Rebecca Wetzel, and Lindsay Goldstein
