Functional and Cognitive Recovery of Patients With Traumatic Brain Injury: Prediction Tree Model Versus General Model
HyunSoo Oh and WhaSook Seo
A prediction model for recovery or mortality after brain injury must be quick and simple enough to use without special training.

Features

Continuing Education

Patients’ Perceptions of Nurses’ Skill
Peggy Rupp Wysong and Evelyn Driver
To what extent is the observed technical skill of a nurse during a procedure a factor that patients use to assess the nurse’s skill?

Continuing Education

Continuous ST-Segment Monitoring: Protocol for Practice
Kristin E. Sandau and Maureen Smith
The purpose of continuous ST-segment monitoring is to provide an alert for potential ischemia.
